State	Finished
Completed on	Tuesday, 12 May 2026, 8:10 PM
Time taken	1 hour 50 mins
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Write a Python program to append a new line at a specific position in a text file, shifting existing lines down.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to insert the new line at.
   - New content for the new line.
2. **Output:**
   - The updated file with the new line inserted at the specified position, shifting the existing lines down in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

  Inserted line..

Output:

Line one.
Line two.
Inserted line.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`3`
	`Inserted line.`
		`Line one.`
		`Line two.`
		`Inserted line.`
		`Line three.`
		`Line four.`

Answer: (penalty regime: 0 %)

```python
input_filename = input().strip()
line_number = int(input().strip())
new_content = input().strip()

with open(input_filename, 'r' ) as infile:
    lines = infile.readlines()

index = line_number - 1

if index >= len(lines):
    if lines and not lines[-1].endswith('\n'):
       lines[-1] += '\n'
    lines.append(new_content + '\n')
elif index < 0:
    lines.insert(0, new_content + '\n')
else:
    lines.insert(index, new_content + '\n')

with open('output.txt', 'w') as file:
```

```
with open('output.txt', 'w') as file:
    file.writelines(lines)
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		3
		Inserted line.
			Line one.
			Line two.
			Inserted line.
			Line three.
			Line four.
				Line one.
				Line two.
				Inserted line.
				Line three.
				Line four.
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		4
		Inserted line D.
			Line A.
			Line B.
			Line C.
			Inserted line D.
				Line A.
				Line B.
				Line C.
				Inserted line D.
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 2 | Correct Mark 1.00 out of 1.00

Develop a Python program to copy the contents of one file to another file.

Description:

1. **Input:**
   - Source file and destination file names.
2. **Output:**
   - The content of the source file copied to the destination file.

For example:

Test	Input	Result

`with open('output1.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`output1.txt`
		`This is the source file.`
		`It contains multiple lines of text.`
		`Here is another line.`

Answer: (penalty regime: 0 %)

```python
source_filename = input().strip()
destination_filename = input().strip()

with open(source_filename, 'r') as infile:
    content = infile.read()

with open(destination_filename, 'w') as file:
    file.write(content)
```

	Test	Input	Expected	Got	

✔	`with open('output1.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input1.txt`
		`output1.txt`
			`This is the source file.`
			`It contains multiple lines of text.`
			`Here is another line.`
				`This is the source file.`
				`It contains multiple lines of text.`
				`Here is another line.`
					✔

✔	`with open('output2.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input2.txt`
		`output2.txt`
			`Hello, world!`
			`Python programming is amazing.`
			`Let's copy this text to another file.`
				`Hello, world!`
				`Python programming is amazing.`
				`Let's copy this text to another file.`
					✔

	Test	Input	Expected	Got	

✔	`with open('output3.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input3.txt`
		`output3.txt`
			`Single line.`	`Single line.`	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 3 | Correct Mark 1.00 out of 1.00

Write a Python program to reverse the contents of a specific line in a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to reverse.
2. **Output:**
   - The updated file with the specified line's contents reversed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

Output:

Line one.
Line two.
eerht eniL.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	3
		Line one.
		Line two.
		eerht eniL.
		Line four.

Answer: (penalty regime: 0 %)

```python
input_filename= input().strip()
line_number = int(input().strip())

with open(input_filename, 'r') as infile:
    lines = infile.readlines()

index = line_number - 1
if 0 <= index < len(lines):
    original_line = lines[index].rstrip('\n')

if original_line.endswith('.'):
   text_to_reverse = original_line[:-1]
   reversed_line = text_to_reverse[::-1] + '.'
else:
    reversed_line = original_line[::-1]

if lines[index].endswith('\n'):
    lines[index] = reversed_line + '\n'
else:
    lines[index] = reversed_line

with open('output.txt', 'w') as file:
    file.writelines(lines)
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		3
			Line one.
			Line two.
			eerht eniL.
			Line four.
				Line one.
				Line two.
				eerht eniL.
				Line four.
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		2
			Line A.
			B eniL.
			Line C.
				Line A.
				B eniL.
				Line C.
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 4 | Correct Mark 1.00 out of 1.00

Develop a Python program to read a text file and count the total number of words in the file.

Description:

1. **Input:**
   - A text file containing several lines of text.
   - File name you should get as input.
2. **Output:**
   - The total number of words in the file.

For example:

Input	Result
input2.txt	Total words: 14
input3.txt	Total words: 15

Answer: (penalty regime: 0 %)

```python
input_filename = input().strip()

with open(input_filename, 'r') as infile:
    content = infile.read()

words = content.split()
total_words = len(words)

print(f"Total words: {total_words}")
```

	Input	Expected	Got	
✔	input1.txt	Total words: 6	Total words: 6	✔
✔	input2.txt	Total words: 14	Total words: 14	✔
✔	input3.txt	Total words: 15	Total words: 15	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 5 | Correct Mark 1.00 out of 1.00

Create a Python program to find the longest word in a text file.

- **Input:**
  - A text file containing multiple lines of text.
- **Output:**
  - The longest word in the file.

For example:

Input	Result
input1.txt	Longest word: containing

Answer: (penalty regime: 0 %)

```python
input_filename = input().strip()

with open(input_filename, 'r') as infile:
    content = infile.read()

words = content.split()

longest_word = ""
for word in words:
    clean_word = "".join(char for char in word if char.isalnum())
    if len(clean_word) > len(longest_word):
        longest_word = clean_word
print(f"Longest word: {longest_word}")
```

	Input	Expected	Got	
✔	input1.txt	Longest word: containing	Longest word: containing	✔
✔	input2.txt	Longest word: thousand	Longest word: thousand	✔
✔	input3.txt	Longest word: supercalifragilisticexpialidocious	Longest word: supercalifragilisticexpialidocious	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 6 | Correct Mark 1.00 out of 1.00

Write a Python program to count the frequency of each word in a given text file.

Description:

1. **Input:**
   - String as input.
2. **Output:**
   - A list of words with their corresponding frequency count to be write in a file "output.txt"

Example:

- **Input File Content:**

  apple orange apple banana apple orange

Output:

apple: 3
orange: 2
banana: 1

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`text = file.read()`
`print(text)`
	`apple orange apple banana apple orange`	`apple: 3`
		`banana: 1`
		`orange: 2`

Answer: (penalty regime: 0 %)

```python
input_string = input().strip()
words = input_string.split()

frequency_dict = {}
for word in words:
    clean_word = "".join(char for char in word if char.isalnum()).lower()
    frequency_dict[clean_word] = frequency_dict.get(clean_word, 0) + 1

sorted_words = sorted(frequency_dict.keys())

with open('output.txt', 'w') as file:
    for word in sorted_words:
        file.write(f"{word}: {frequency_dict[word]}\n")
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`apple orange apple banana apple orange`	`apple: 3`
			`banana: 1`
			`orange: 2`
				`apple: 3`
				`banana: 1`
				`orange: 2`
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`Hello world! Hello everyone. Welcome to the world of programming.`	`everyone: 1`
			`hello: 2`
			`of: 1`
			`programming: 1`
			`the: 1`
			`to: 1`
			`welcome: 1`
			`world: 2`
				`everyone: 1`
				`hello: 2`
				`of: 1`
				`programming: 1`
				`the: 1`
				`to: 1`
				`welcome: 1`
				`world: 2`
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`One fish two fish Red fish blue fish`	`blue: 1`
			`fish: 4`
			`one: 1`
			`red: 1`
			`two: 1`
				`blue: 1`
				`fish: 4`
				`one: 1`
				`red: 1`
				`two: 1`
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 7 | Correct Mark 1.00 out of 1.00

Develop a Python program to read a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to read.
2. **Output:**
   - The content of the specified line.

input1.txt:

Line one.
Line two.
Line three.
Line four.

For example:

Input	Result
input1.txt 3	Line three.

Answer: (penalty regime: 0 %)

```python
input_filename = input().strip()
line_number = int(input().strip())

with open(input_filename, 'r') as infile:
    lines = infile.readlines()

if 1 <= line_number <= len(lines):
    print(lines[line_number - 1].strip())
```

	Input	Expected	Got	
✔	input1.txt 3	Line three.	Line three.	✔
✔	input2.txt 3	Line C.	Line C.	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 8 | Correct Mark 1.00 out of 1.00

Develop a Python program to identify and print all palindrome words from a given text file.

Description:

1. **Input:**
   - A text file containing multiple words.
2. **Output:**
   - A list of palindrome words found in the file name as 'output.txt'.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt	madam
		arora
		malayalam

Answer: (penalty regime: 0 %)

```python
input_filename = input().strip()

with open(input_filename, 'r') as infile:
    content = infile.read()

words = content.split()
palindrome_words = []

for word in words:
    clean_word = "".join(char for char in word if char.isalnum()).lower()
    if clean_word == clean_word[::-1] and clean_word != "":
        palindrome_words.append(word.strip().strip(".,!?;:"))

with open('output.txt', 'w') as outfile:
   for word in palindrome_words:
       outfile.write(word + '\n')
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt	madam
			arora
			malayalam
				madam
				arora
				malayalam
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 9 | Correct Mark 1.00 out of 1.00

Create a Python program to delete a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to delete.
2. **Output:**
   - The updated file with the specified line removed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`text = file.read()`
`print(text)`
	input1.txt
	2
		Line one.
		Line three.
		Line four.

Answer: (penalty regime: 0 %)

```
input_filename = input().strip()
line_to_delete = int(input().strip())

with open(input_filename, 'r') as file:
    lines = file.readlines()

index_to_remove = line_to_delete - 1
if 0 <= index_to_remove < len(lines):
    lines.pop(index_to_remove)

with open('output.txt', 'w') as file:
    file.writelines(lines)
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		2
			Line one.
			Line three.
			Line four.
				Line one.
				Line three.
				Line four.
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		3
			Line A.
			Line B.
				Line A.
				Line B.
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Question 10 | Correct Mark 1.00 out of 1.00

Create a Python program to write to a specific line in a text file, replacing the existing content of that line.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to write to.
   - New content for the specified line.
2. **Output:**
   - The updated file with the specified line replaced by the new content in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Updated line two.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	2
	Updated line two.
		Line one.
		Updated line two.
		Line three.
		Line four.

Answer: (penalty regime: 0 %)

```
input_filename = input().strip()
line_to_replace= int(input().strip())
new_content = input().strip()

with open(input_filename, 'r') as file:
    lines = file.readlines()
index_to_modify = line_to_replace - 1
if 0 <= index_to_modify < len(lines):
    lines[index_to_modify] = new_content + '\n'

with open('output.txt', 'w') as file:
    file.writelines(lines)
```

	Test	Input	Expected	Got	

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input1.txt`
		`2`
		`Updated line two.`
			`Line one.`
			`Updated line two.`
			`Line three.`
			`Line four.`
				`Line one.`
				`Updated line two.`
				`Line three.`
				`Line four.`
					✔

✔	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input2.txt`
		`2`
		`Line B Updated.`
			`Line A.`
			`Line B Updated.`
			`Line C.`
				`Line A.`
				`Line B Updated.`
				`Line C.`
					✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
